CHAPTER – 86

STRESS MANAGEMENT FOR FORMERS THROUGH YOGA

Dr. P. Gomathi Devi
Assistant Professor,
UG Department of Commerce (CA),
Nallamuthu Gounder Mahalingam College,
Pollachi.

Abstract---In today's fast-paced world, where technological advancements have transformed nearly every aspect of our lives, it becomes increasingly important to strike a balance between the modern and the traditional. Every day, farmers take meticulous care of their animals and crops, ensuring they are healthy and safe. Yet farmers need support to manage their own stress and fatigue. This stress can become especially intense when an on-farm injury occurs, commodity prices are low or natural disasters decrease yield. One such area where this balance is crucial is the practice of yoga and the evolution of agriculture implements.

1. Introduction

Many of the stress factors that affect agricultural production are largely beyond the control of the producer. For example, producers in one region might be facing severe draught while other regions are experiencing extreme flooding. Seasonal variations such as the daily stress of managing milk production in contrast to the seasonal stress of crop or livestock management are other contributing factors. According to the CDC, suicide among farmers were 3.5 times the national average in 2019 and have been increasing over the past decade.

Farm stress is the stress experienced by farmers and their families because of the unique agricultural work environment. The fear of losing a farm is attached to more than just the closing of a business. Farming is a generational legacy, a way of life, an identity. The burden of losing the farm and not passing it down to the next generation is something that weighs heavily on the farmer or rancher. The endless hours, fatigue, physical and emotional stress eventually takes its toll on the family unit.

2. The Importance of Yoga:

Yoga, an ancient practice originating from India, has gained immense popularity worldwide for its numerous physical, mental, and spiritual benefits. It encompasses a range of practices, including physical postures (asanas), breathing exercises (pranayama), meditation, and ethical principles. The practice of yoga offers a holistic approach to maintaining overall well-being.

1. Physical Health: Regular yoga practice promotes flexibility, strength, and balance. Asanas help improve posture, increase blood circulation, and enhance the functioning of various organs. It is known to alleviate chronic pain, boost immunity, and reduce the risk of lifestyle-related diseases.

2. Mental Well-being: Yoga not only strengthens the body but also cultivates mental clarity and emotional stability. Through deep breathing techniques and meditation, it reduces stress, anxiety, and depression. Practicing mindfulness enhances self-awareness, focus, and concentration.

3. Spiritual Growth: Yoga provides a pathway for spiritual development by connecting the mind, body, and spirit. It encourages self-reflection, self-discovery, and a sense of inner peace. By embracing yogic principles such as non-violence, truthfulness, and contentment, individuals can lead a more purposeful and harmonious life.

3. The Impact of Modernization in Agriculture Implements:

Agriculture, the backbone of human civilization, has undergone significant changes due to modernization and technological advancements. While these changes have undoubtedly brought several benefits, they have also resulted in certain consequences that need consideration.

1. **Increased Efficiency:** Modern agricultural implements, such as tractors, harvesters, and irrigation systems, have revolutionized farming practices. They have significantly increased productivity, reduced labor requirements, and improved efficiency in crop cultivation. Farmers now have access to advanced machinery that helps them save time and achieve higher yields.

2. **Environmental Concerns:** The modernization of agriculture implements has also raised environmental concerns. The extensive use of chemical fertilizers, pesticides, and mechanization has led to soil degradation, water pollution, and biodiversity loss.

The overreliance on technology in farming practices has sometimes disrupted the natural balance and sustainability of ecosystems.

3. **Rural Livelihoods:** The introduction of modern agriculture machinery has affected traditional farming practices and rural livelihoods. While it has increased productivity and income for some farmers, others, particularly small-scale and marginalized farmers, have faced challenges in adapting to the changes. This has led to socio-economic disparities and a widening rural-urban divide.

4. **Sustainable Agriculture:** To address the challenges posed by modernization, there is a growing need for sustainable agriculture practices. Agroecology, organic farming, and precision farming techniques are gaining momentum as alternatives that prioritize environmental conservation, biodiversity, and the long-term well-being of farmers.

Farmers can incorporate yoga into their daily routines

➢ **Take breaks**. Instead of working through lunch or breaks, take a few minutes to stretch and do some yoga poses. This can help alleviate muscle tension and improve overall physical and mental well-being.

➢ **Practice at home**. Many yoga classes and instructional videos are available online for free or for a small fee. This allows farmers to practice at home, at a time that is convenient for them. I jumped onto Instagram for a minute and typed farm yoga into the search box for tags and 16.2 thousand posts popped up! There's lots of info out there that folks are willing to share.

➢ **Find a local class**. Many rural communities offer yoga classes or instructors who are willing to travel to farms. This can be a great way for farmers to practice with others, and get support and guidance from a qualified instructor.

➢ Use yoga to warm up or cool down. Before and after physical labor, take a few minutes to do some yoga stretches. This can help prepare the body for the demands of the workday and aid in recovery afterwards.

Stress-reduction ideas:

1. **Get good sleep**. Not just sleep, good sleep. Even if you cannot get the recommended seven to eight hours of sleep, you can improve your sleep by following some effective sleep tips. "30 Tips & Tricks for Better Sleep," a list

developed by retired Nebraska Extension educator Susan Harris, provides a guide to getting more restful sleep and reducing stress

2. **Maintain social interactions**. Farming and ranching can be a lonely job. With heavy workloads and the feeling of having so little time to complete the work, you may be trading time spent with family and friends for a few more work hours. Try blocking out 20 minutes during your day to visit. Take a moment to stop into the coffee shop, sale barn or post office if you see a vehicle parked there that you recognize. Call an old friend. Even a quick, friendly conversation can help reduce the stress we are feeling.

3. **Network with other producers**. Attending commodity meetings and farm shows will allow you to discuss your farming concerns, get ideas for creative solutions and discover innovations to make your operation more profitable and less stressful.

4. **Choose healthy food**. Eating a balanced diet rich in fruits, vegetables, whole grains and lean proteins can help reduce the effects of stress on our bodies and improve productivity. Become a lifelong learner. Take advantage of opportunities available through your local Extension, university and industry to learn about new technologies, techniques and management that can save you time and money — thereby reducing stress. Enroll in a class today.

5. **Use deep breathing and relaxation techniques**. Practice deep breathing exercises as you drive to help calm your nervous system. Try a relaxing exercise as you go about your day.

6. Seek professional help: This step to managing stress is to seek professional help if you feel overwhelmed, depressed, anxious, or suicidal. You can consult a doctor, a therapist, a counselor, or a coach who can offer you diagnosis, treatment, guidance, or coaching. They can also access online or phone-based services that can provide you with information, resources, or referrals. You can seek professional help as a preventive measure or as a last resort, depending on your situation and needs.

4. Conclusion

One of the primary benefits of yoga is improved flexibility and range of motion. This can be especially important for farmers, who may spend long periods of time in the same positions or performing repetitive tasks. Stretching and strengthening the muscles through yoga can help reduce the risk of injury and improve overall

physical function. Another aspect of yoga that may be particularly beneficial for farmers is the focus on mindfulness and being present in the moment. Farming can be a fast-paced and chaotic occupation, with many tasks and responsibilities competing for attention. Yoga can help farmers learn to focus their minds and be more present in their work, which can lead to increased productivity and satisfaction.
