AI-Powered Sustainable Marketing and Consumer Analytics

Dr. B.Indira Priyadharshini, *Assistant Professor, UG Department of Commerce (CA), Nallamuthu Gounder Mahalingam College, Pollachi.*

Abstract

The convergence of artificial intelligence (AI), sustainability, and marketing analytics marks a paradigm shift in how businesses engage with environmentally-conscious consumers. As organizations face pressure to adopt sustainable practices, AI-driven technologies have emerged as powerful tools to analyze consumer behavior, predict trends, and implement data-informed strategies that align with sustainability goals. This paper explores the role of AI in shaping sustainable marketing, delves into consumer analytics powered by AI, and assesses how businesses can leverage these innovations for ethical, transparent, and impactful marketing. The research draws from interdisciplinary sources, integrating insights from AI, environmental studies, behavioral science, and marketing literature.

1. Introduction

Sustainable marketing - defined as the promotion of environmental and socially responsible products, practices, and brand values-has gained prominence as global consciousness about climate change and ethical consumerism grows. Simultaneously, artificial intelligence (AI) has transformed the marketing landscape, empowering businesses with tools for personalization, data-driven decision-making, and automation. This research paper examines how AI intersects with sustainable marketing and consumer analytics, emphasizing the shift toward ethical branding and green marketing strategies. The study investigates how AI enables businesses to understand consumer sentiments, preferences, and expectations around sustainability and how this insight can lead to more responsible, efficient, and impactful marketing practices.

2. The Emergence of AI in Marketing

AI's role in marketing has evolved significantly, encompassing various applications such as:

- Predictive analytics,
- Customer segmentation,
- Sentiment analysis,
- Chatbots and virtual assistants, and
- Recommendation engines

These applications rely on machine learning, natural language processing, and deep learning models that process large datasets to derive actionable insights (Davenport, Guha, Grewal, & Bressgott, 2020). In the context of sustainability, AI helps organizations detect behavioral shifts towards eco-friendly products and align messaging with evolving environmental values.

3. Understanding Sustainable Marketing

Sustainable marketing goes beyond profit maximization by integrating the three pillars of sustainability-environmental, social, and economic-into marketing strategies. It involves promoting:

- Eco-friendly products
- Ethical sourcing
- Circular economy principles
