**Dr. Sunil H. Der**

05-07-2025

# One Day International e-Conference on “Multilingual Research, Education, and Social Sciences” (MRESS2025)

**05 July 2025 (Virtual Mode)**

## Keynote Speakers

**Dr. Sougand Akbarian**  
Assistant Professor of English  
Translator and Author of Indian Literature,  
TEDx speaker  
Publisher, CEO and Founder of Sougand  
Akbarian Publications, Iran

**Prof. Mallikarjun. K. Sheelin**  
Professor  
Department of Geography  
Baba Mastnath University,  
Rohtak, Haryana

**Dr. Sunil H Der**  
Associate Professor of English  
School of Arts and Humanities  
Dr.Subhash University  
Gujarat

**Prof. Dr. Soudamini  
Menon**  
Director  
A.C.T Academy

## Plenary Talks

## Best Paper Award in All Sub-Themes

- Research in Assamese, Tamil, Bengali, Bodo, Dogri, Gujarati, Hindi, Kannada, Kashmiri, Konkani, Maithili, Malayalam, Manipuri, Marathi, Nepali, Oriya, Punjabi, Sanskrit, Santhali, Sindhi, Telugu, and Urdu
- Neurocognitive Approaches to Multilingualism: Brain-based insights into language learning and usage
- Multilingual Research Methodologies, Language model systems
- English Language Teaching, Literature and Other Foreign Languages
- Translation and Interpretation in Multilingual Societies
- Challenges and Opportunities in Mother Tongue-Based Education
- Technology-Enhanced Language Learning
- AI Integration, Computational pedagogy and Innovative Pedagogy
- Education Technology, Education Management
- Education Psychology, Developing Social-Emotional Learning (SEL)
- Curriculum Innovation and Development in Teacher Education
- Social Justice and Inequality, Globalization and its Social Impacts
- Political Science, Governance and Public Policy
- Commerce, Industries, Logistics, Retail Management
- Economics and Public Administration
- Sociology: social stratification, social change, family, crime, and demography
- Social psychology, developmental psychology, and clinical psychology
- Anthropology: cultural anthropology, social, and linguistic anthropology
- Geography : distribution of human populations, cultures, economies
- Communication Studies, Social Work, Development Studies

### Important Dates

**Last date to submit full paper:**

**30 June 2025**

**Notification of Acceptance:**

**01 July 2025**

**Email : [secretary@actacademy.in](mailto:secretary@actacademy.in)**

**Contact Numbers: 6369453300 & 9360089769**

### Instructions

- All papers will be published in e-Book with ISBN Number **978-81-987735-9-3**
- Authors have to prepare the full paper as per the format of Journal with APA Reference style (See in Registration Form)
- Platform :Googlemeet App
- E-certificate with serial Number & QR code
- Recording of the sessions will be provided
- Co-Author has to pay the fee for receiving e-certificate

### Organizing Committee

- Dr. Kiran Rani Panwar, Department of Liberal Arts and Humanities, Swami Vivekanand Subharti University, Meerut, Uttar Pradesh
- Dr. CH. Varalakshmi, Head, Department of MBA, Andhra Loyola College, Vijayawada
- Dr. Yogesh Jorapur, Assistant Professor, Research Head of Chemistry, Pratibha College of Commerce and Computer Studies, Pune & Maharashtra
- Ms. Shiny Karunya, Research Associate, Karunya Institute of Technology and Sciences
- Prof. Surabhi Lata, Maharaja Agrasen Institute of Technology, New Delhi
- Dr Hemamalini N, Assistant Professor of English, English, Marudhar Kesari Jain College for women vaniyambadi, Vellore, Tamil Nadu

### Chairpersons & Advisory Committee

- Dr. R. Jeyanthi, Associate Professor, Education, VISTAS, Chennai, Tamil Nadu
- Dr Rupa Sarkar, Associate Professor, English, ARKA JAIN University, Jharkhand
- Dr Vidya Nagre, Assistant Professor, Head, Department of English and Education, Vishwakarma University, Pune, Maharashtra
- M. V. Harichandana Devi, Associate Professor, Management, Vardhaman college, Telangana
- Dr Ketki Ramesh Shinde, Assistant Professor, English, Vishwakarma University, Maharashtra
- Dr Rajeswari R S, Dr Vishwanath Karad MIT World Peace University, Pune, Maharashtra
- Dr. Anita Saha, Assistant Professor of English, Govt. Digvijay Autonomous PG College, Rajnandgaon, Chhattisgarh
- Dr. Parul Saraogi, Associate Professor & Head of the Department (BBA), GGI, ludhiana
- Dr.Divya Ramprasad Maheshwari, Associate Professor of English, Tolani Commerce College, Adipur, Gujarat
- Dr. L. Santhosh Kumar, Assistant Professor of English Kristu Jayanti College, Autonomous Bengaluru, Karnataka

### Abstract

*Digital governance has emerged as a transformative force in enhancing economic efficiency and public service delivery. By integrating technology into government operations, digital governance minimizes bureaucratic delays, reduces corruption, and ensures transparency and accountability. This sub-theme explores how e-governance tools like online portals, mobile apps, digital payment systems, and automated data management streamline administrative processes and improve access to services. It also examines the economic impact of digital initiatives such as Digital India, e-procurement, and Aadhaar-based services. The study underscores that digital governance not only enhances citizen engagement but also plays a crucial role in optimizing resource utilization and boosting the overall efficiency of the public sector.*

**Keywords:** Digital Governance - Economic Efficiency - Public Service Delivery -Technology in Administration – Transparency - Digital India

### Introduction

In the era of rapid technological advancement, digital governance has become a crucial tool for enhancing the efficiency, transparency, and accountability of public administration. By integrating Information and Communication Technology (ICT) into government processes, digital governance enables faster decision-making, streamlined service delivery, and improved citizen engagement. Economic efficiency is achieved when government resources are utilized optimally, costs are reduced, and services are delivered effectively to the public. Initiatives such as Digital India, Aadhaar-enabled services, e-governance portals, and digital payment systems like UPI have transformed traditional governance models into more responsive and data-driven systems. This shift not only minimizes bureaucratic delays and corruption but also promotes financial inclusion, better monitoring of schemes, and inclusive development. As governments around the world adopt digital tools, the link between digital governance and economic efficiency becomes increasingly significant in building resilient, citizen-centric, and future-ready public administration.

### Objectives of the study

- To understand the concept and significance of digital governance in modern public administration.

- To analyze how digital governance contributes to economic efficiency in government operations.
- To evaluate the impact of digital governance on reducing administrative costs and enhancing service delivery.
- To identify the key challenges and barriers in the implementation of digital governance systems.

## Concept and evolution of digital governance

Digital governance refers to the use of Information and Communication Technology (ICT) to plan, implement, and monitor government policies and services. It enables governments to operate more transparently, efficiently, and responsively, using digital tools such as online portals, mobile apps, cloud computing, and data analytics to interact with citizens and manage internal processes. Digital governance goes beyond basic e-governance by focusing not only on service delivery but also on decision-making, accountability, and public participation through digital platforms. It aims to create a citizen-centric governance model that is accessible, transparent, and data-driven.

Time Period	Phase	Key Characteristics
Pre-1980s	Traditional Governance	Manual administration, paper records, high bureaucracy, minimal public access
1980s–1990s	ICT Adoption Phase	Introduction of computers, internal automation, basic Management Information Systems
2000s	E-Governance Era	Online portals, service delivery through web platforms, National e-Governance Plan (NeGP)
2010–2015	Digital Transition	Mobile governance (m-governance), SMS services, Aadhaar introduction, online databases
2015–Present	Digital Governance Era	Digital India, UPI, e-Hospital, e-NAM, DBT, AI & Big Data in governance, real-time dashboards
Future (Ongoing)	Smart Governance	AI-driven policy-making, Blockchain, IoT integration, Predictive analytics, Cybersecurity

Digital governance plays a vital role in transforming public administration by making it more **efficient**, **transparent**, **accountable**, and **citizen-centric**. It leverages technology to improve decision-making, streamline service delivery, and enhance public participation. The integration of digital tools into administrative processes enables governments to respond faster to citizen needs while optimizing resource usage.

## Importance of Digital Governance in Public Administration

Digital governance plays a vital role in transforming public administration by making it more **efficient, transparent, accountable, and citizen-centric**. It leverages technology to improve decision-making, streamline service delivery, and enhance public participation. The integration of digital tools into administrative processes enables governments to respond faster to citizen needs while optimizing resource usage.

### **Enhanced Efficiency and Speed**

- Automation of processes reduces delays in file handling, approvals, and service delivery.
- Real-time monitoring allows quicker corrective actions and data-driven decisions.

### **Transparency and Accountability**

- Digital records, online portals, and audit trails reduce opportunities for corruption.
- Citizens can track applications and file grievances, promoting administrative responsibility.

### **Improved Service Delivery**

- Services like birth certificates, land records, payments, and public welfare schemes are now accessible 24/7 through digital platforms.
- Mobile governance has brought services closer to rural and remote populations.

### **Cost and Resource Optimization**

- Paperless offices and automation reduce administrative costs.
- Efficient allocation of human and financial resources improves productivity.

### **Citizen Empowerment and Participation**

- Platforms like MyGov and grievance redressal portals enable citizens to voice concerns and contribute ideas.
- Digital literacy efforts promote inclusivity.

### **Better Monitoring and Evaluation**

- Use of dashboards, MIS, and analytics helps in evaluating the impact of policies and schemes.
- Real-time data enables proactive governance.

### **Crisis Response and Resilience**

- During emergencies like the COVID-19 pandemic, digital platforms ensured continuity of services (e.g., telemedicine, online education, digital payments).

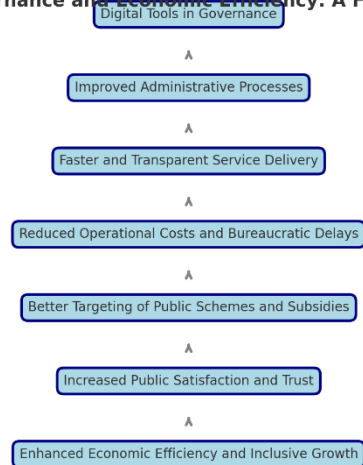

### **Digital Governance and Economic Efficiency: A Functional Link**

Digital governance refers to the use of digital technologies such as computers, the internet, mobile applications, and data systems to manage government operations and deliver public services. It plays a major role in modernizing public administration by making it faster, more transparent, and more accountable. When digital tools are used in governance, they help reduce paperwork, speed up processes, and eliminate the need for physical visits to government offices. This saves time and effort for both citizens and government employees. For example, services like applying for certificates, paying bills, receiving subsidies, or tracking applications can now be done online from anywhere. This digital transformation also leads to **economic efficiency**, which means using resources in the best and most cost-effective way. Digital governance helps reduce government expenses by cutting down on manual work, printing, and storage costs. It also helps prevent corruption and ensures that government benefits reach the right people without delays or misuse. Programs like **Aadhaar**, **Direct Benefit Transfers (DBT)**, and **Unified Payments Interface (UPI)** in India are good examples of how digital systems can improve efficiency. These platforms help in better planning, accurate data collection, and targeted delivery of services.

Furthermore, digital governance increases public satisfaction and trust in the government. When services are delivered quickly and fairly, citizens are more likely to engage with public systems and follow rules. This creates a positive cycle where better governance supports stronger economic growth. In rural and remote areas, digital tools also help bridge the gap by providing access to services that were previously hard to reach. Overall, digital governance is not just a technology upgrade—it is a powerful tool for achieving inclusive growth and efficient use of public resources, making governance more responsive, reliable, and economically sound.

## Digital Governance and Economic Efficiency: A Functional Link

## Challenges in Implementing Digital Governance

While digital governance brings many benefits, its implementation faces several challenges, especially in developing countries like India. Some of the major challenges include:

### 1. Digital Divide:

Many people, especially in rural and remote areas, lack access to the internet, smartphones, and digital literacy. This creates inequality in accessing digital services.

### 2. Infrastructure Limitations:

Insufficient broadband connectivity, poor electricity supply, and lack of IT infrastructure in government offices slow down digital adoption.

### 3. Cyber security and Data Privacy:

As more data is stored and shared online, the risk of hacking, identity theft, and data misuse increases. Ensuring strong cybersecurity and privacy laws is a major concern.

### 4. Resistance to Change:

Some government employees and departments are resistant to adopting new digital systems due to a lack of training, fear of job loss, or comfort with traditional methods.

### 5. Financial Constraints:

Implementing and maintaining digital systems requires investment in software, hardware, training, and maintenance, which can be a burden on limited public budgets.

### 6. Low Digital Literacy:

A significant portion of the population is not familiar with using digital tools or online services, making it difficult for them to fully benefit from digital governance.

## Conclusion

Digital governance has become a key driver in improving the quality, speed, and transparency of public administration. By using technology, governments can reduce operational costs, streamline service delivery, and reach citizens more effectively. This contributes directly to economic efficiency by making better use of public resources, reducing delays, and cutting down corruption. However, to fully realize these benefits, governments must address challenges like infrastructure gaps, cybersecurity risks, and the digital divide. With the right investments, training, and inclusive policies, digital governance can transform traditional systems and support sustainable economic growth, making governance smarter, more accountable, and people-friendly.
